

Duct Dampers – 24V Motorized

Enjoy having complete electronic control of which rooms your HVAC system heats or cools. These units are compatible with our popular HVAC Zone Controllers SH469

Enjoy having complete electronic control of which rooms your HVAC system heats or cools with these 24V Motorized Duct Dampers that can be automated (or manually controlled) in a variety of ways. These units are compatible with our popular RCS HVAC Zone Controllers.

With electronic duct dampers, an appliance module and any X10 timer, you can reduce your heating/cooling expenses by cutting off airflow to unoccupied rooms during work hours. Or, if you want a room to be a little colder or warmer than the rest of the rooms in the house (i.e. grandma and grandpa's bedroom), any mechanical thermostat can close the damper when a pre-specified temperature is reached.

These 24V Motorized Dampers are available for 6", 8", 10" and 12" duct diameters, and can be ordered in normally-open or normally-closed configurations. When no power is supplied to the Normally Closed unit, the damper will be closed. When no power is supplied to the Normally Open unit, the damper will be open.

- Applications:**
- Air conditioning for Luxury Homes
 - Air conditioning for Luxury Offices
 - Hotel Air conditioning controller
 - Smart School Air conditioning controller

Model: SH-620

Part #: Smarhome 307106
