

Battery-Operated Flicker Candle 4x6 Beeswax

This kind of product Battery Operated Flicker Candle design for easy to use and no worry about its flame burning out of control.

While candles can add beautiful ambience to any setting, they don't last long and can become costly to replace. In addition, even a mild breeze can turn a small candle into a dangerous fire hazard. But the long-lasting Battery-Operated Flicker Candle imitates natural candles, shining a flickering light and made of a wax-like resin that looks and feels like real wax. Since it runs on battery power, you'll never have to worry about its flame burning out of control.

The Battery-Operated Flicker Candle contains three LEDs that produce multiple points of randomly shifting light, creating a glow that flickers, rolls, and casts dancing shadows, just like a real candle flame. A microchip inside the candle creates random, non-repeating light patterns.

Model: SH-628

Part #: Smarthome 4646BD

Features

- Battery powered candle requires no electricity
- Three LEDs flicker like a real candle.

Specifications

3 LEDs that produce multiple points of randomly shifting light.
Power: 4 AA batteries
Battery Life: Over 72 hours

Dimensions

Size: 4" diameter x 6" H
