

The VIA!®dj Family

Digital Music Servers

The original, multi award-winning VIA!dj Digital Music Server has been significantly updated with exciting new features including a Digital Jukebox, iPod® download capability, 20X CD ripping and a fourth set of analog outputs for multi-zone listening!

This new, single output VIA!dj-s has all the features of its award-winning big brother, yet provides an affordable solution for consumers who wish to reap the benefits of whole-house digital music management, but whose listening needs do not require multiple, independent outputs.

“HC” stands for High-Capacity, and with its 250GB hard drive the new VIA!dj-hc gives you just that. This top-of-the line 4-output model has all the updated features of its siblings, but can store more than 4,000 hours of your favorite music!

Music That’s Fast, Easy and Fun! ■

The VIA!dj family of Digital Music Servers from ELAN are digital audio storage and music management systems that give you instant access to all your music from any VIA!® Touch Panel or television in the home. View the cover art of all your CDs as well as album titles, artists and songs. Select music by artist, CD, track, genre or an unlimited number of personalized playlists. Colorful, user-friendly graphics make navigating through your music collection fast, easy and fun.

New and Exciting Features!

All three VIA!dj models have the new Digital Jukebox feature that allows you to create a song list from your music collection and play it back in the order you entered them. In the tradition of the classic American jukebox,

just add as many songs as you like to the Jukebox list and let ‘em play! Also new, these djs can rip CDs at 20x real-time speed from its front CD tray, enabling you to add new music to a dj’s hard drive faster than ever before! Want to take your music with you when you’re on the go? Now you can easily transfer music from your VIA!dj to iPods and other portable digital music players!

3 Models to Fit Your Needs

There are only two differences between the three VIA!dj models: the number of audio outputs, and the storage capacity of the hard drive.

The VIA!dj-s has a single pair of audio outputs that allow you to listen to your dj throughout your home. With the VIA!dj and VIA!dj-hc, you can do even more! Each has four pairs of audio outputs that allow you to listen to different tracks in different rooms at the same time!

Both the VIA!dj and dj-s have 160GB hard drives. That’s enough room to store over 2,800 hours of music. The “high-capacity” VIA!dj-hc has a 250GB hard drive, enough disc space to store more than 4,000 hours of your favorite music.

VIA!dj . . . Access Your Music With Ease
