

RETHINK. REINVENT. REDEFINE.

Dynalite[®]

Revolution panels provide the ultimate user interface solution delivering complete aesthetic and functional flexibility.

Facia Options

Suitable for an extensive range of materials providing unlimited decor matching possibilities.

Backlit Buttons

Improves panel visibility in all lighting conditions.

Button Sizes

Single, double and triple width buttons enhance configuration possibilities.

Button Engraving

Clearly designates button functions ensuring intuitive system operation.

Custom Features

Vast range of optional devices including faders, displays, key switches and plug sockets for unique control solutions.

Dynalite®

Led Indicators

Available in a range of colours enabling clear indication of system status.

Adjustable Button Height

Readily accommodates any change in cover material thickness, improving architectural design flexibility.

Range of Sizes

Available in the two popular international mounting formats, in single and multi-gang configurations.

The background of the advertisement is a dramatic, high-contrast image of molten metal, likely in a foundry, with bright orange and yellow flames and glowing liquid surfaces. In the foreground, two rectangular control panels are displayed at an angle. The panel in the background is a brushed metal finish with a vertical row of seven black, rectangular buttons. The panel in the foreground has a perforated or mesh-like texture and also features a vertical row of seven similar black buttons. The overall composition suggests a fusion of industrial strength and modern design.

Rethink.

The Concept

The Revolution series user control panels herald a new era in design. For years, interfaces for lighting control, energy management and home automation systems have been aesthetically limited. Now Dynalite has removed the constraints and developed a range like no other.

Incorporating innovative clip-on cover fastening and button depth adjustment capability, our panels accommodate practically any flat architectural surface medium from 1.2mm to 6.5mm in depth. That gives you the freedom to choose; stainless steel, stone, glass, laminate, wood, vinyl, ceramic; the options are limitless.

***"Why be bound by one finish,
one colour, one size?"***

Reinvent.

The Features

Equally at home in commercial or residential settings, the Revolution panel is available in a range of configurations, from single column, catering for one to eight buttons, through to double or triple column designs featuring up to twenty four buttons.

The panels feature smooth action buttons with LED indicators that provide tactile and visual feedback. Button backlighting illuminates engraved text, improving night-time panel location and operation.

Infrared receive capabilities eliminate the need for independent sensors where IR remote control operation is required.

***"The perfect solution
for commercial or
residential settings"***

Redefine.

Customisation

Nothing is too hard for the Revolution. Build a custom panel to meet your needs; choose from a multitude of button sizes, colours and layouts; key switches to lock out unauthorised use, mechanical faders for individual channel control and network sockets for connection to the Dynalite DyNet lighting control and home automation network.

Custom engraving allows you to identify the function of each button, using symbols or text, and buttons are easily removed and replaced if your requirements change.

"It's all about choice"

Revolution.

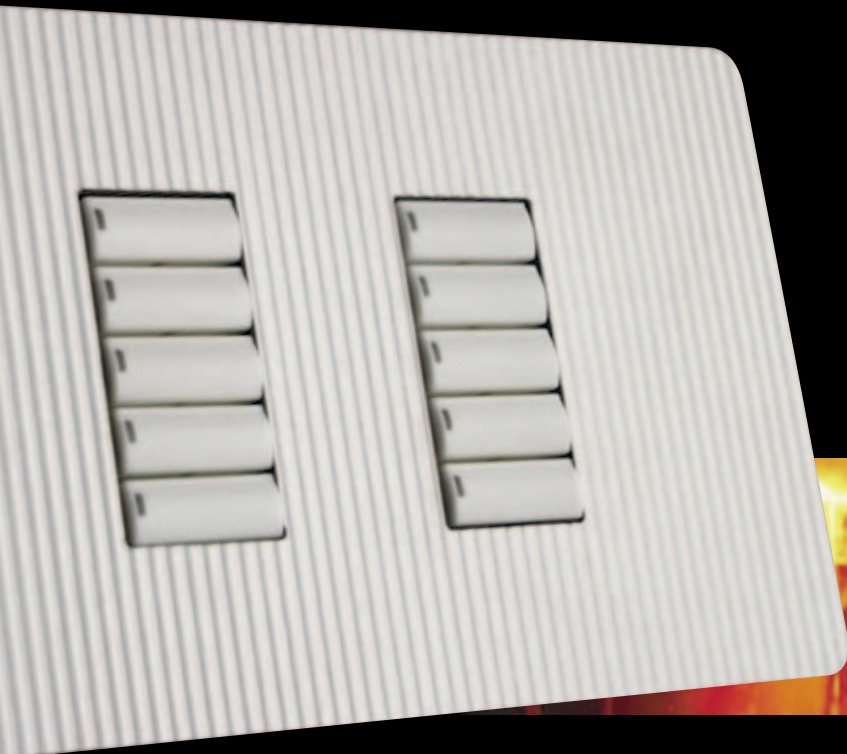

Just the Tip of the Iceberg

The Revolution panel is a state-of-the-art interface, for a state-of-the-art system. Dynalite offers some of the most advanced energy management solutions and automation systems available today. Designed and manufactured in Australia to ISO9000 standards, all our products ensure a reliable and flawless performance.

Dynalite's products include everything from controllers, switching and dimmers, to sensors, interfaces and software. Designed to integrate seamlessly, the products have earned a reputation globally for both their flexibility and their reliability.

***"A flexible interface
for a flexible system"***
